

POLES, SUPPORTS

CO.SE.MA. offers a complete range of supports, from a simple pole to a candelabro, to position lanterns and other signaling apparatus at the height required.

All supports come complete with all installation material necessary, including connecting cables and junction boxes.

The standard material is steel, suitably treated, but on request stainless steel AISI 304 or 316 can be used.

SMALL POLES SERIES CP

These are the most basic supports, with heights variable from 50 cm. to 150 cm. The base has a bored flange for assembly on a grid or on a coupling flange foundation, the upper end finishes with a flange for the lantern assembly.

The poles have a hot galvanized finish with epoxy paint coating.

POLES SERIES PFZ

These are the most suitable types of support for jetties and piers. The height varies from 3 to 10 metres, and they are installed in a concrete casting on the wharf or breakwater.

The poles are constructed in flanged sections of max. 3,5 metres each to make transport and handling much easier.

Each pole is equipped with a removable ladder for the first 2 metres and from there to the summit, with a fixed ladder and guardrail.

Stainless steel or galvanized bolts are used.

The poles have a hot galvanized finish with epoxy paint coating.

Housing series CSN is used to contain all apparatus necessary to the functioning of the lantern.

Model	Clear height m	Length of sunken section m	N° of parts excluding ladders	Shipping volume mc	Code
CP 50	0,5	/	1	0,04	043-201-00
CP 100	1,0	/	1	0,08	043-203-00
CP 150	1,5	/	1	0,10	043-205-00
PFZ 3	3	0,8	3	0,60	043-101-00
PFZ 4	4	0,8	3	1,10	043-103-00
PFZ 5	5	1,2	4	1,60	043-105-00
